Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 and 16-20, drawn to a method of optimizing an illumination source, classified in class 359, subclass 630.
- II. Claims 6-15 and 21-30, drawn to a method for determining an optimal mask, classified in class 708, subclass 446.
- III. Claims 31-42, drawn to an apparatus for optimizing an illumination source, classified in class 356, subclass 400.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP §806.05(e)). In this case the apparatus could be used for optimizing a patentable different illumination source.

Inventions II and I, III are directed to an unrelated product and process. Product and process inventions are unrelated if it can be shown that the product cannot be used in, or made by, the process. See MPEP § 802.01 and § 806.06. In the instant case, the method of determining an optimal mask is not related to the apparatus for optimizing an illumination source.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because

Art Unit: 1756

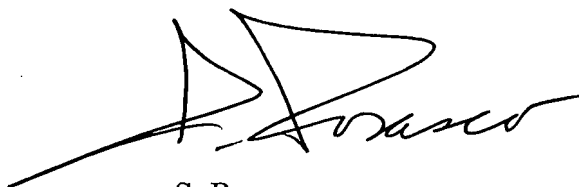

the inventions have acquired a separate status in the art in view of their different classification, their recognized divergent subject matter, and require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
